

PUBLIC HEALTH

SYNOPSIS

The postgraduate program in Health Sciences (Public Health), provides a comprehensive and preparative curriculum designed to equip students with the skills necessary to analyse pertinent issues in public health through critical evaluation and applied research. Within this academic framework, students will engage in rigorous research activities, exploring topics that contribute to the advancement of knowledge in epidemiology, biostatistics, occupational and environmental health, family health, health management, public health nutrition, global health, and health promotion. The program aligns with the University's philosophy, emphasizing the Islamization of Human Knowledge, Integration, and Internationalization to achieve Comprehensive Excellence (IIICE). Through this approach, students are not only prepared to address contemporary public health challenges but also contribute to the broader goals of knowledge propagation and global excellence.
